Subject: Boeing Plant 2-OA11 Technical Memorandum Work Plan Addendum Revision
Attachments: Technical Memorandum Work Plan Addendum 2016-0706.pdf

Good afternoon Dave and Melissa,

Consistent with discussions with Dave yesterday, attached is a minor revision to the Additional Characterization for OA-11 Interim Measure Technical Memorandum Work Plan Addendum, for your review and approval. Due to the accelerated timeframe associated with approval required for the additional field work scheduled for this Friday July 8th and based on yesterday's discussion, this email is considered the official transmittal of this revision for Agency approval.

This revision incorporates the draft PCB results for archive samples that were requested after the initial round of analysis to more fully bound areas of contamination. It includes changes to both Tables 1 and 2 and Figure 2. Revisions to Table 2 were also made based on a preliminary review of draft TPH data received yesterday, which indicate that proposed FMCLs were not exceeded in samples collected during the June 2016 investigation. This additional TPH data has not yet been processed or validated and is not included in this addendum revision.

The field work associated with the attached work plan addendum revision is being conducted on Friday July 8th. As discussed yesterday, we are requesting USEPA concurrence and approval to move forward with this proposed additional characterization by reply email no later than July 7, 2016. Please let us know if you have any remaining questions or comments. We appreciate you both working with us iteratively on this interim measure. Thanks.

Will Ernst
